

HD-A35

HD DVD Player

TOSHIBA

Leading Innovation >>>

Our flagship HD-A35 adds the high-powered sound so important to the true audiophile. Next-level audio with 5.1 channel analog output and High Bit Rate Audio (up to 7.1 channel) are available via HDMI™. Our premium model also supports Deep Color™ via HDMI™, allowing compatible display devices to deliver smoother image transitions, improved contrast and detail, and up to a billion possible colors all in the comfort of your own home theater!

ADVANTAGE

High definition playback delivers 720p/1080i/1080p resolution, up to six times the resolution of DVD*. Using leading-edge efficient video compression standards makes it possible to experience the full potential of your HDTV.

Advanced audio, including Dolby® TrueHD, Dolby® Digital Plus and DTS® HD (core only), along with legacy formats including Dolby® Digital and DTS® bring an increased sonic realism to movie soundtracks.

Backwards compatibility means you can enjoy your existing library of DVDs and CDs, and through the process of upconversion and output through HDMI, your movies are scaled to match the resolution of your HD display for near-HD picture quality.

Web-Enabled capability opens a whole new world of entertainment experiences that can include access to exciting studio-provided enhanced features.

1080p/24 frames per second (24p) support offers a smoother, more film-like, viewing experience. The HD-A35 outputs images at 24 frames per second, the same frame rate used by directors when using film to create motion pictures. Watch your favorite movies in their native frame rate with compatible HDTVs.

REGZA LINK™ (HDMI™-CEC) is a convenient feature, offering the capability to communicate with and control another CE device in a completely new way.

For example, using REGZA Link with "One Touch Play," consumers will be able to turn on an HDMI-CEC capable HDTV and a Toshiba HD-A35 DVD player, and start playing a movie with a single touch of a button on the player's remote.

Unit Dimension (WHD) in.	16.9 x 2.34 x 12.9
Carton Dimension (WHD) in.	19.7 x 5.6 x 16.1
Unit Weight lbs	7.26
Carton Weight lbs	10.6
UPC Code	022265001915

Important Notes

HD DVD with high-definition content required for HD viewing. Viewing high-definition content and up-converting DVD content may require an HDCP capable DVI or HDMI input on your display device. Up-conversion of DVD content will result in near HD picture quality. Firmware update may be required for some interactive features depending on content, which may also require an always-on broadband internet connection. To take advantage of web-enabled network content, installing the latest firmware (ver.2.3 for HD-XA1, HD-A1, and HD-D1; ver.2.5 for HD-XA2, HD-A2, HD-A2W, HD-D2, HD-A2C, and HD-A20; and ver.1.1 for HD-A35, HD-A30, and HD-A3) is required. Web-enabled features require an always on broadband connection along with specific movie titles that include this form of content. Some features may require additional bandwidth. Some recordable media may not be supported. MP3/WMA audio files not supported. Dolby Digital Plus, Dolby TrueHD and DTS support for up to 5.1 channels (DTS HD support for DTS core only). Use of High Bit Rate Audio requires a High Bit Rate Audio compatible AV receiver. HDMI audio output requires connection to a PCM capable device. Because HD DVD is a new format that makes use of new technologies, certain disc, digital connection and other compatibility and/or performance issues are possible. This may, in rare cases, include disc freezing while accessing certain disc features or functions, or certain parts of the disc not playing back or operating as fully intended. If you experience such issues, please refer to the FAQ sections of www.toshibahddvd.com or www.tacp.toshiba.com for information on possible work-around solutions or the availability of firmware updates that may resolve your problem, or contact Toshiba Customer Solutions. 1080p capable display required for viewing content in 1080p. Deep Color feature as specified in HDMI 1.3a requires compatible Deep Color capable HD display and/or device. Use of REGZA LINK™ which is a feature based on HDMI-CEC requires an HDMI-CEC compatible display device. Depending on the specifications of your display device, some or all REGZA LINK™ functions may not work even if your display device is HDMI-CEC compatible. For 24p output, content that was created in 1080p/24 frames/sec is required. Viewing 24p output requires an HD display capable of accepting a 1080p/24Hz signal. Some features subject to delayed availability. While every effort has been made at the time of publication to ensure the accuracy of the information provided herein, product specifications, configurations, system/component/options availability are all subject to change without notice. *Resolution comparison based on 480i vs. 1080i pixel counts.
