#### IMPORTANT NOTES

HD DVD with high-definition content required for HD viewing. Viewing high-definition content and up-converting DVD content may require an HDCP capable DVI or HDMI input on your display device. Up-conversion of DVD content will result in near-HD picture quality. Firmware update may be required for some interactive features depending on content, which may also require an always-on broadband internet connection. To take advantage of web-enabled network content, installing the latest firmware (ver. 1.0) is required. Web-enabled features require an always-on broadband connection along with specific movie titles that include this form of content. Some features may require additional bandwidth. Some recordable media may not be supported. MP3/WMA audio files not supported. Dolby Digital Plus, Dolby TrueHD and DTS support for up to 5.1 channels (DTS HD support for DTS core only). HDMI audio output requires connection to a PCM capable device. Because HD DVD is a new format that makes use of new technologies, certain disc, digital connection and other compatibility and/or performance issues are possible. This may, in rare cases, include disc freezing while accessing certain disc features or functions, or certain parts of the disc not playing back or operating as fully intended. If you experience such issues, please refer to the FAQ sections of [www.toshibahddvd.com](http://www.toshibahddvd.com) or [www.tacp.toshiba.com](http://www.tacp.toshiba.com) for information on possible work-around solutions or the availability of firmware updates that may resolve your problem, or contact Toshiba Customer Solutions. Some features subject to delayed availability. While every effort has been made at the time of publication to ensure the accuracy of the information provided herein, product specifications, configurations, system/component/options availability are all subject to change without notice. \*Resolution comparison based on 480i vs. 1080i pixel counts.
